CKR 65 D kit phase out

Dear Sirs,

We inform you that after introducing the **AXYR® CDY** inserts, which only require the CKR 65 kit, we have modified the inserts molds to allow achieving the IP66/IP67/IP69 or IP68 degree of protection with enclosures size 21.21 by **supplying a unique screw and gasket kit: CKR 65.**

Such changes standardize all 21.21 connectors to the use of the CKR 65 kit, making the CKR 65 D special kit unnecessary.

Part numbers involved:

CDF 07 CDF 08 CDF 07 N
CDM 07 CDM 08 CDM 07 N

area affected by the change

Other related information:

- **CKR 65** becomes the only kit necessary and recommended on our catalogues to reach the degree of protection IP65/IP67/IP69, for all 21.21 inserts. The CKR 65 D kit will be maintained only as a spare part.
- The CKR 65 D kit can still be used on the new modified CD inserts. This will facilitate the transition and stock sell-out.
- The standard screw supplied with the CDF/M 07 and CDF/M 08 inserts will also be standardized with the screw present in the 21.21 inserts, making also the CR 21.21 VFD spare kit superfluous.

The modified CDF/M 07 and CDF/M 08 inserts will be available starting from July 1st, 2024 and will be identified by the **ZIP code -H.**

We remain at your disposal for any further information.

Best regards

I.L.M.E. S.p.A.
